SHOPIFY THEME

NovaCart

How to Use the Theme

After Uploading to Shopify

Sidebar · Customize · Header · Currency · Colors

Version 1.6.7

Practical guide with real storefront screenshots

Table of Contents

1. Upload the Theme to Shopify
2. Open the Theme Customizer
3. Understanding the Editor Layout
4. Storefront Sidebar Menu
5. Customize Section — Main Control Center
6. Header — Colors, Announcement Bar & Currency
7. Adding New Currencies
8. Homepage Sections (Template)
9. Products & Collections Pages
10. Changing Colors (Merchant & Visitor)
11. Save and Publish
12. Common Issues & Fixes

1. Upload the Theme to Shopify

Step 1. Sign in to your Shopify Admin.
Step 2. Go to Online Store → Themes.
Step 3. Click Add theme → Upload zip file.
Step 4. Select NovaCart_Shopify_Theme_Upload_v1.6.7.zip.
Step 5. Wait until the theme appears in your theme library.
Step 6. Click Customize to configure it, or Publish when you are ready to go live.

Tip: Keep your previous theme installed as a backup until you are happy with NovaCart.

2. Open the Theme Customizer

From the Themes page, click Customize next to NovaCart. The editor has three main areas:

Area	Location	What it does
Settings panel	Left side	Header group · Template · Cart drawer
Live preview	Center	See changes instantly as customers will
Top bar	Top	Page selector · Save · Exit

3. Understanding the Editor Layout

In the left panel you will see:

Header group

- Customize — global control center (colors, currency rates, logo, free shipping, marketing popup, product & collection features)
- Header — header layout, announcement bar, and currency blocks

Template (depends on the page you are editing)

- On the homepage: Marquee · Categories · Promo countdown · Featured collection · ...
- On collection / products pages: grid, filters, and sorting options

Cart drawer

- Settings for the slide-out cart.

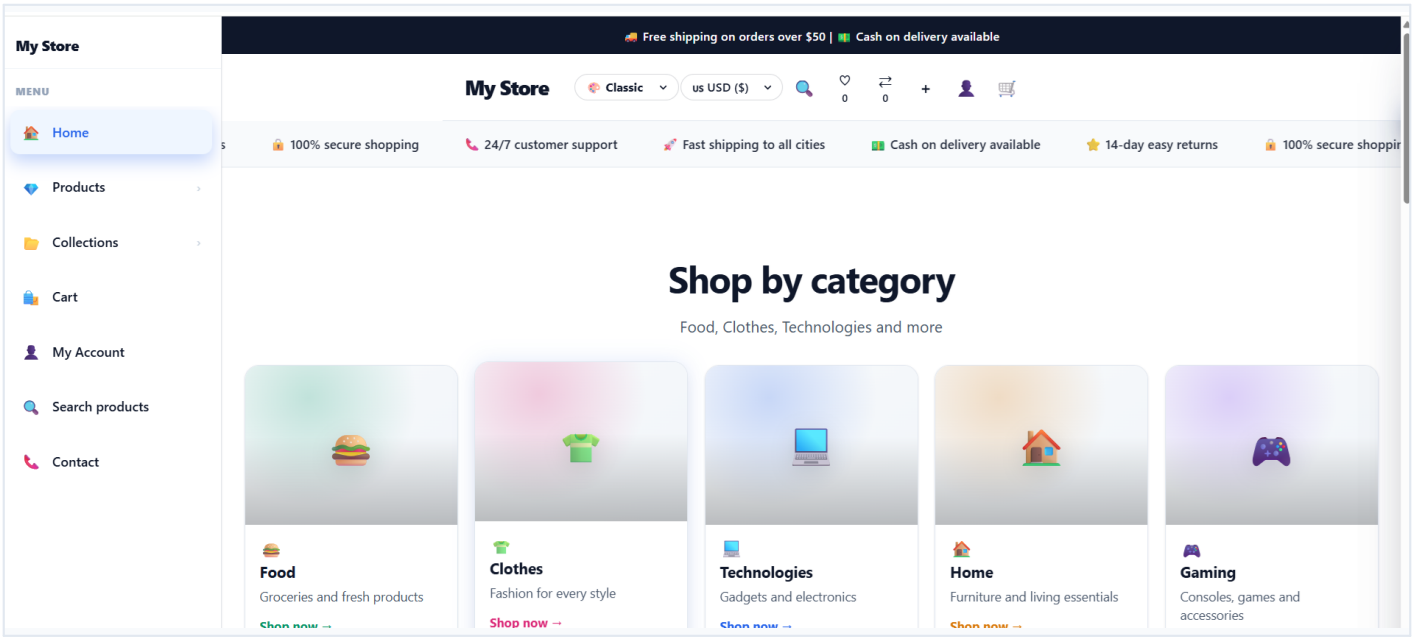

Important: If the gear icon (Theme settings) looks empty, that is normal. Use Header group → Customize — that is NovaCart's real control center.

4. Storefront Sidebar Menu

On the live storefront, customers see an elegant left sidebar with these items:

Item	What it opens
Home	Homepage
Products	All products with sort and filters
Collections	Collections list
Cart	Cart page
My Account	Customer login / account
Search products	Search page
Contact	Contact form

Sidebar menu on the storefront

Always visible on the left: Home, Products, Collections, Cart, My Account, Search, Contact

5. Customize Section — Main Control Center

Path:

Header group → Customize

From here you control global store settings:

Setting	What it does
Currency rates	Conversion rates from store currency to USD / EUR / GBP / MAD
Logo and favicon	Upload your brand logo and browser icon
Free shipping	Free shipping threshold in cents (5000 = $50.00)
Marketing popup	Enable popup, image, heading, discount code, delay
Product features	Size chart · Frequently bought together · Shipping calculator
Collection features	Filters · columns · quick view · quick add

How to open it:
1. Open Customize from Themes
2. In the left panel expand Header group
3. Click Customize (not Header)

6. Header — Colors, Announcement Bar & Currency

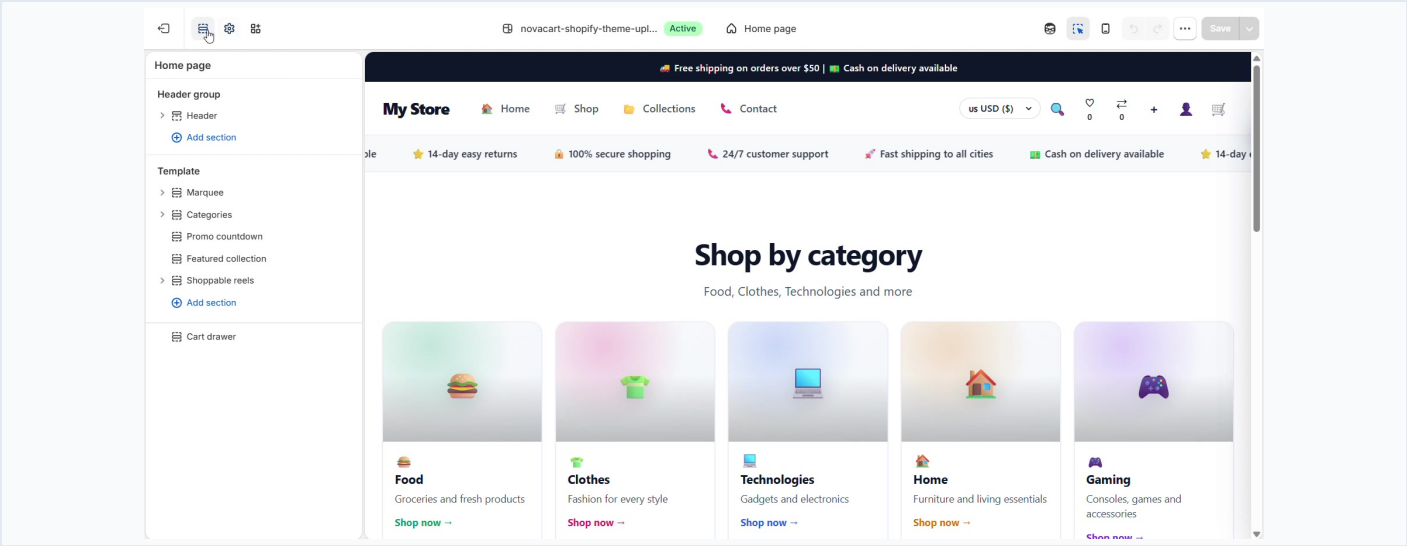

Path:

Header group → Header

Inside Header you can:

- Set Theme colors / Color scheme — Classic · Dark · Emerald · Rose · Royal
- Toggle and edit the announcement bar (text + colors)
- Add Currency blocks — each block is one display currency
- Upload logo and adjust header layout

Theme editor — Header and currency blocks

Left panel shows Currency blocks under Header

7. Adding New Currencies

Path:

Header group → Header → Add Currency

For each currency block, fill in:

Field	Example	Notes
Currency code	USD / EUR / GBP	ISO currency code
Symbol	$ or €	Shown next to prices
Flag emoji	□□	Optional — shown on the switcher
Conversion rate	1	How much 1 unit of store currency equals in this currency
Use as default	On for USD	Default display currency

Important: Currency switching in the theme is display only. The real checkout currency is controlled by Shopify Markets and Payments.

After you add currencies, customers see the currency switcher in the top bar next to the color scheme button.

8. Homepage Sections (Template)

Make sure the top page selector is set to Home. Under Template in the left panel you will find:

Section	What you edit
Marquee	Scrolling trust bar — add Items (emoji + text)
Categories	Category cards (Food, Clothes…) — add Category blocks and set links
Promo countdown	Limited-time offer — title, description, code, button
Featured collection	Product grid — select a collection in section settings
Shoppable reels	Short product video highlights
Contact form	Homepage contact form

No products showing? Add products under Admin → Products, set them to Active, then in Featured collection choose a real collection or All products.

9. Products & Collections Pages

Use the top page selector in the editor to switch to Products, Collections, or a single Product page.

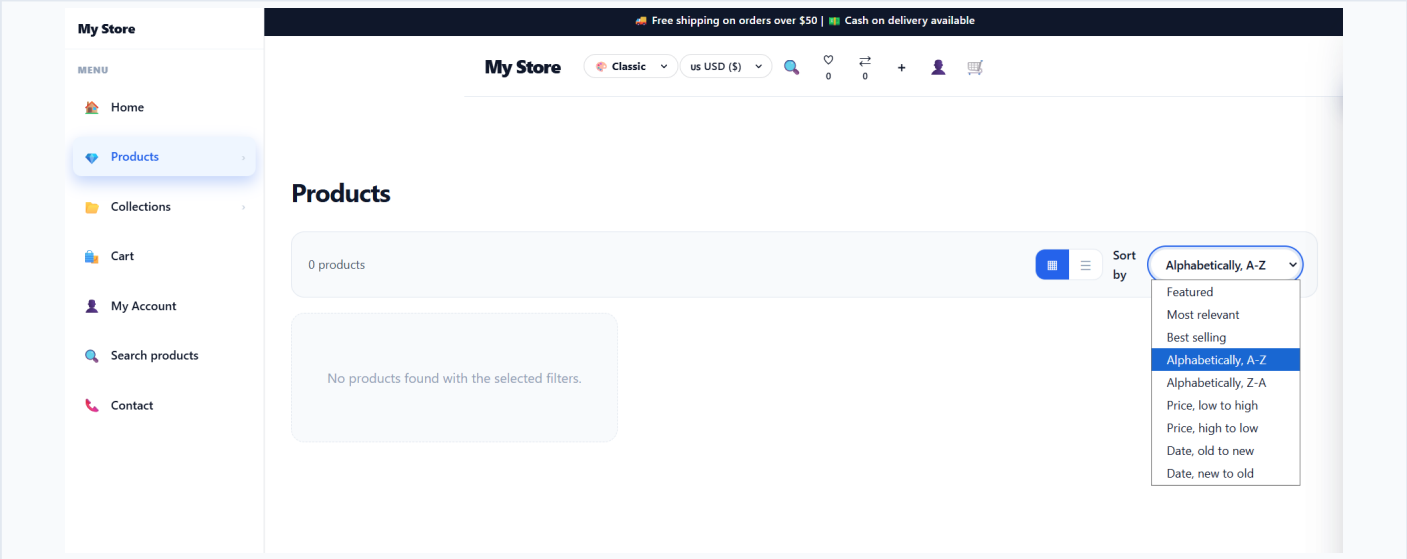

Collection / Products listing

- Grid columns and layout
- Filters and sorting
- Quick View button
- Quick Add to cart

Single product page

- Size chart modal
- Frequently Bought Together
- Shipping calculator
- Complementary products

Products page as customers see it

Product count · grid/list toggle · sort dropdown

10. Changing Colors (Merchant & Visitor)

There are two ways:

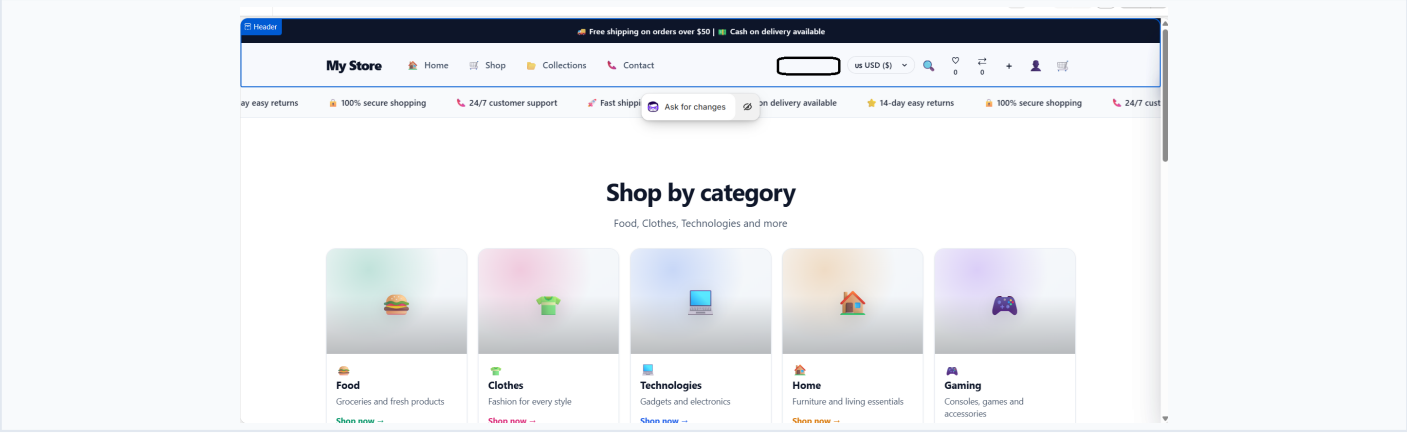

A) As the merchant (Theme Editor)

Header group → Header → Theme colors / Color scheme
Choose: Classic · Dark · Emerald · Rose · Royal, then Save.

B) As a visitor on the storefront

Next to the currency switcher in the top bar there is a color scheme button. Visitors pick their preferred look; the choice is stored in the browser.

Color switcher location next to currency

Top bar area beside USD is where color and currency controls appear

11. Save and Publish

- After any change, click Save at the top right of the editor.
- If you see “Leave page with unsaved changes?”, choose Stay or save first.
- Preview in the editor does not mean customers see the changes — the theme must be Published.
- From Themes, click Publish to make NovaCart the live theme.

Recommended order: Configure everything in Customize → Save → test on mobile → then Publish.

12. Common Issues & Fixes

Problem	Solution
Theme settings (gear) is empty	Use Header group → Customize
Cannot find Add Currency	Header group → Header → Add Currency
No products on homepage	Add Active products; select a collection in Featured collection
Contact = Page not found	Use the homepage Contact form, or create a page with handle “contact”
Language does not change	Settings → Languages → Add language → Publish
Currency does not change at checkout	Display conversion only — configure Markets / Payments
Colors barely change the UI	Save the Color scheme and try the visitor color switcher

End of guide — NovaCart v1.6.7
Upload · Customize · Save · Publish
